ABOUT US!

2 | DECADES OF
EXCELLENCE

SPECIALIST IN
POWDER COATING / WOOD COATING
OF ALUMINIUM EXTRUSIONS

Associated Coaters Pvt. Ltd. is an India based venture specializing in the **Powder Coating / Wood Coating** of Aluminium Extrusions. The demand for durable and super durable powder coated profiles have seen a remarkably consistent growth over the past 2 decades and hence our success voyage has gained momentum over the years.

We have earned a great market recognition and goodwill on the basis of our on time and efficient deliveries of our powder coated aluminium sections throughout **Kolkata, Orissa, Siliguri, Bihar and Jharkhand**. In short, our team is well capable of handling projects on Pan India Basis. We believe in keeping at pace with changing needs and in diversifying with time. Hence continuous quality improvement is our commitment towards the goals of satisfying our customers with our speedy delivery, accuracy, reliability, flexibility, understanding & personal attention.

INVESTMENT & INNOVATION

We ensure to remain at the forefront of Technology with the use of Latest Equipments. Presently, we have two manual powder coating plants, one fully automatic plant and wood finish plant from **Decoral (Italy)**.

Constant drive for quality improvement remains our key objective. Our full emersion pre-treatment process, supported and monitored by our chemical supplier, provides a key element in our process. This coupled with the use of architectural grade super durable powder ensures our ability to provide 'quality as standard'.

QUALITY CONTROL

Quality control is ensured through the use of highly skilled staff, well maintained plant, use of high graded powders as well as documented inspection procedures covering gloss levels, paint thickness & adhesion testing as well as visual inspection and final packaging.

CHEMICAL PRE-TREATMENT

The basis of any good coating is preparation. The vast majority of powder coating failures can be traced to a lack of a suitable preparation. The preparation treatment is different for different materials. In general, for all applications, 7 tank pre-treatment for aluminium sections is followed.

PACKAGING & DISPATCH

Once inspection procedures are completed covering gloss levels, paint thickness & adhesion testing as well as visual inspection, The material is properly taped which protects the aluminium sections during the process of fabrication and installation and then the final packaging is done with the wrapping materials that further protects the coated surface during the storage period and also during the transportation.
